VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:
see separate sheet

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: EP-A-583131

D2: US-A-5153 722

D1 discloses a flame detection algorithm that processes a sequence of video images, to detect sequences of images of flames (abstract). Therefore, the subject-matter of Claim 1 is not new (Article 33.2 PCT).

D1 discloses also the implementation of the algorithm in a system with a video source and an alarm triggered when a flame is detected. Although the frame grabber is not explicitly mentioned, the skilled person knows that usually a frame grabber is used in order to digitize the images (see D2, abstract). Therefore, the subject-matter of Claim 2 is not new (Article 33.2 PCT).

D1 discloses also the filtering of live images so that changes within a well-defined frequency band, characteristic of flame-like behaviour, is registered (col.7, lines 4-20). Therefore, the subject-matter of Claim 3 is not new (Article 33.2 PCT).

D2 discloses an algorithm that classifies changes in a sequence of images between flicker-like behaviour and non flicker-like behaviour (col.5, lines 40- 65). D1 discloses also the discrimination of changes the flickering rate of which are above or not a certain threshold, i.e. the classification between flicker-like behaviour and non flicker-like behaviour. Therefore, the subject-matter of Claim 4 is not new (Article 33.2 PCT).

The steps of Claim 5 are all disclosed in D1 (see above cited explanations). Therefore, the subject-matter of Claim 5 is not new (Article 33.2 PCT).

The additional step of Claim 6, i.e the computing of edge to volume ratio in the binary image is a further condition referring to the size of the flames in order to give or not an alarm signal . A similar step is disclosed in D2 (computing of the size of the flame area : col.5, line65- col.6, line 4) in order to trigger or not a fire suppressant unit. However, the aim is different (Claim 7) as are the features calculated (Claim 6).

Claim 8 cannot be seen as inventive, as the optimality criteria is a well known

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB00/03717

criteria almost used in every method (Article 33.3 PCT).

Re Item VIII

Certain observations on the international application

Although claims 1-4 have been drafted as separate independent claims, they appear to relate effectively to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought and in respect of the terminology used for the features of that subject-matter. The aforementioned claims therefore lack conciseness. Moreover, lack of clarity of the claims as a whole arises, since the plurality of independent claims makes it difficult, if not impossible, to determine the matter for which protection is sought, and places an undue burden on others seeking to establish the extent of the protection.

Hence, claims 1-4 do not meet the requirements of Article 6 PCT.
